

Company	Country	Description	Website
	USA	<p>Corstrata delivers a comprehensive wound care management program, wound patient consultations and specific services such as wound program assessment, formulary design, treatment guidelines assessment, wound documentation review and education. Wound program development is available for pressure injury (ulcer) prevention and management, diabetic foot ulcer prevention and management, ostomy care and management and palliative wound management [1] [2].</p>	<p>https://corstrata.com/ https://corstrata.com/what-we-do/ https://corstrata.com/diabetic-foot-ulcer-prevention/</p>
	Switzerland	<p>Mobile solution for professional assessment and documentation of chronic wounds — to save time, reduce costs, avoid medical errors and get more time for the patients. Developed by a team of medical doctors and mobile specialists the solution can, thanks to its ease of use and operability, easily be incorporated into any wound care routine. The modular based +WoundDesk platform brings value to everyone involved in the wound care process; from the point of care, to patient management and wound analytics for research [3].</p>	<p>https://wounddesk.com/</p>
	Canada	<p>SurroSense Rx is an example of such technologies that enables continuous screening plantar pressure through smart insoles, and notifying the patient in case of a sustained plantar pressure beyond a predefined threshold was detected. This technology could be used to educate patient to avoid conditions leading to sustained plantar pressure (e.g., unbroken and prolonged standing), which in turn could assist with prevention of diabetic foot ulcers [4].</p>	<p>https://www.orpyx.com/</p>
		<p>The SVS iPG application provides education on different types of wound and includes guidelines to manage each wound type. In addition, it includes a calculator to estimate WIfI score for DFU based on easy-to-assess metrics associated with wound size, ischemia, and degree of infection [4].</p>	<p>Apple App Store and Google Play</p>
